NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The community map repository should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations** (BFEs) and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Sillwater Elevations tables contained within the Flood Insurance Study (FIS) Report that accompanies this FIRM. Users wimm the Hood insurance Study (FIS) Report that accompanies the FIRAL Users should be aware that BFEs shown on the FIRAM represent rounded whole-floot selevations. Three DFEs are intended for flood insurance rating purposes only and should not be used as the sales source of flood elevation information. Accordingly, flood elevation data presented in the FIS Report and the FIRAM for purposes of conditions and/or flood elevation data presented in the FISR floor purposes of constraints and or floor default on the FIRAM for purposes of constraints and or floor default on the FIRAM for purposes of constraints.

Costal Base Flood Elevations shown on this map apply only landward of 0.0" North American Vertical Datum of 1988 (NAVD 88). Users of this FRM should be waver that Costal flood elevations are also provided in the Summary of Silvater Elevations table in the Flood Insurance Study Report for this jurisdiction. Elevations shown in the Summary of Silvater Elevations table should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydrautic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertitinent floodway data are provided in the Flood Insurance Study Report

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study Report for information on flood control structures for this jurisdiction.

The projection used in the preparation of this map year Universal Transverse Memorato (UTM) zone 10. The hosticatoral feature was MAD 83. GRS 1998 spheroid. Differences in distum, spheroid, projection or UTM zones used in the production of PIRMs for adjacent jurisdictions may result in slight positional differences in map features across puriodiction boundaries. These differences do not affect the accuracy of this PIRM.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations to the property of the structure and ground elevations between the Netional Geodetic Vertical Datum of 1950, and the North American Vertical Datum of 1950, visat the Notional Geodetic Curvey velocite of the North American Vertical Datum of 1950, visat the Notional Geodetic Curvey velocite of the North American Geodetic Curvey velocite of the North Control Con

NGS Information Services NGAA, NNGS12 National Geodetic Survey SSMC-3, #8202 1315 East-West Highway Silver Spring, Marylsnd 20910-3282 (301) 713-3242

To obtain current elevation, description, and/or location information for bench mark shown on this map, please contact the Information Services Branch of the National Geodetic Survey at (301) 713-3242, or visit its website at http://www.ngs.ngaa.gov.

Base Map information shown on the FIRM was derived from multiple sources. Base map files were provided in digital format by King County CIE, WA DNR, WSDOT, and Pierce County GIS. This information was compiled at scales of 1:12,000 to 24,000 during the time period of 1994-2012.

The profile baselines depicted on this map represent the hydrautic modeling baselines that match the flood profiles in the FIS report. As a result of improved topographic data, the profile baseline, in some cases, may deviate significantly from the channel centerline or appear outside the SFHA.

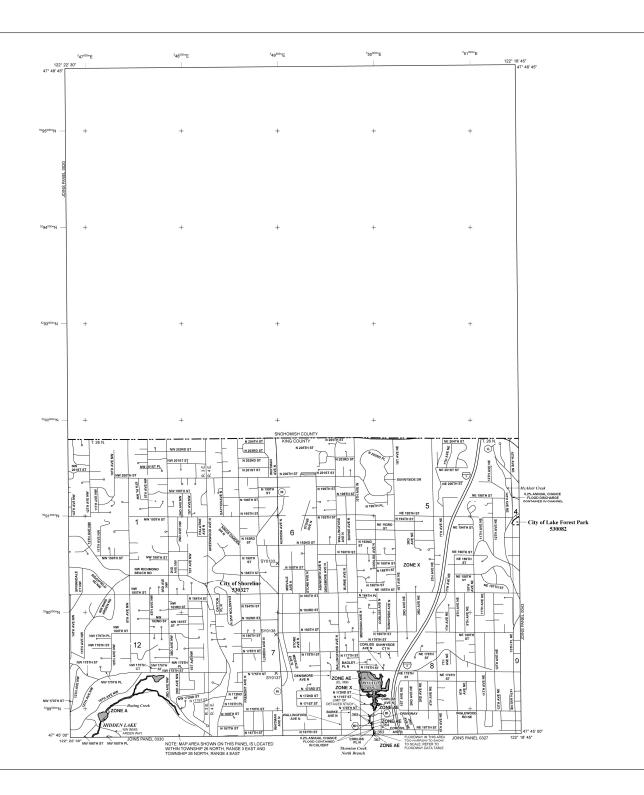

Based on updated topographic information, this map reflects more detailed and up-to-diste stream channel configurations and floodplain delications than those shown on the previous FRIM for this jurisdiction. As a result the Flood Profiles and Floodray Data tables for multiple streams in the Flood insurance Study Report (which contains authoritative hybriduic dash may reflect stream belanded distances in differ from what a shown on the map. Also, the shown on previous results of the stream of the

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing Netional Flood Insurance Program dates for each community as well as a listing of the panels on which each community

For information on available products associated with this FIRM visit the Maservice Center (MISC) website at http://msc/ema.gov, Available products mainclude previously issued letters of Map Change, a Flood Insurance Study Report and/or digital versions of this map. Many of these products can be ordered or obtained directly from the MISC website.

If you have questions about this map, how to order products, or the Nation Flood Insurance Program in general please call the FEMA Map Informat eXchange (FMIX) at 1-877-FEMA-MAP (1-877-336-2627) or visit the FEMA

LEGEND

SPECIAL FLOOD HAZARD AREAS (SFHAs) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

ZONE A No Base Flood Elevations determined. ZONE AE

ZONE AH Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations

ZONE AO Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determine

Special Flood Hazard Areas formerly protected from the 15s annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood cortion (system is being restored to provide protection from the 15s annual chance or greater flood.

Area to be protected from 15s annual chance flood by a Federal flood protection system under construction, no Base flood Bevotions determined.

Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.

ZONE VE Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

ZONE V

ZONE D

The floodway is the channel of a chream plus any adjacent floodplain areas that must be kept free of encreachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

ZONE X Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

Areas determined to be outside the 0.2% annual chance floodplain

Areas in which flood hazards are undetermined, but possible. COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

1% Annual Chance Floodplain Boundary

0.2% Annual Chance Floodplain Boundary Floodway boundary

..... CBRS and OPA boundary

Boundary dividing Special Flood Hazard Area Zones and boundary dividing Special Flood Hazard Areas of different Base Flood Elevation flood depths, or flood velocities.
